

One evidence sequence for every evaluated method

13 colorectal cancer Visium sections | $K = 4$ and 6 | failures retained

Operational definitions

Reference partition:

seed 11, or the 6-neighbor graph for spatial Ward

Switching spot:

aligned label differs from the reference partition

Plausible alternative:

seed 23/37, or a fixed 4-/8-neighbor graph perturbation

Boundary spot:

at least one differently labelled neighbor in the 6-neighbor graph

$K = 4$ and $K = 6$ are coarse and finer practical resolutions, not estimates of a true or optimal number of tissue domains.
